Technical Parameter

Door margin distance: 70mm
 Center distance: 92mm
 Applicable door thickness: Above 40mm
 Square bar: 8 x 8 x L

Material & Surface Treatment

Handle: SS304
 Shroud plate: SS304
 Mounting screws: Stainless steel
 Surface treatment: Wiredrawing SN

Standard Configuration

Handle shroud plate: 1 set
 Lock body: 1 pcs
 Lock cylinder: 1 pcs
 Square bar: 2 pcs
 Installation accessories package: 1 bag
 Key: 5 pcs

Auxiliary Products

Category	Lock body	Lock cylinder
Name	American-standard lock body	American-standard lock cylinder
Model	ST7092A series	SX-008
Material	The panel, gusset plate and spring bolt are all made of 304 stainless steel	Copper
Specification	Lock plate: 203×32	According to the door thickness
Characteristic	Triadius spring bolt, pick-proof design, normally-closed switch and Solid anti-saw spring bolt	6 beads S slot single-row lock cylinder for multi-opening, bathroom and total key management system
Appearance		
Page number	P233	P255

SMB10200 American-Standard Lock

Boundary Dimension

Functional Characteristic

- Meets the American ANSI/BHMAA156.13 Grade 1 standard, and owns the third-party ANSI test report
- Applicable to steel or wooden entrance door, villa door etc.
- 11 different lock bodies with different functions for choosing, suitable for different sites
- 1,000,000 times service life, sturdy and durable
- The function switch button can conveniently realize the switch between door lock and passage lock
- The insurance tongue can prevent the oblique tongue from penetrating
- With 6 beads S slot single-row American-standard lock cylinder

Technical Parameter

Door margin distance:	70mm	Handle:	SS304
Center distance:	92mm	Decorative cover:	SS304
Applicable door thickness:	Above 40mm	Mounting screws:	High-quality steel
Square bar:	8 x 8 x L	Surface treatment:	Wiredrawing SN

Standard Configuration

Handle decorative cover:	1 set	Handle square bar 8X8:	2 pcs
Lock body:	1 pcs	Back-locking square bar 5X5:	1 pcs
Lock cylinder:	1 pcs	Installation accessories package:	1 bag
		Key:	5 pcs

Entrance Door Lock

SMB10212 American-Standard Lock

Boundary Dimension

Functional Characteristic

- Meets the American ANSI/BHMA A156.13 Grade 1 standard, and owns the third-party ANSI test report
- Applicable to steel or wooden entrance door, villa door etc.
- 11 different lock bodies with different functions for choosing, suitable for different sites
- 1,000,000 times service life, sturdy and durable
- The function switch button can conveniently realize the switch between door lock and passage lock
- The insurance tongue can prevent the oblique tongue from penetrating
- With 6 beads S slot single-row American-standard lock cylinder

Technical Parameter

Door margin distance:	70mm	Handle:	SS304
Center distance:	92mm	Decorative cover:	SS304
Applicable door thickness:	Above 40mm	Mounting screws:	High-quality steel
Square bar:	8 x 8 x L	Surface treatment:	Wiredrawing SN

Standard Configuration

Handle decorative cover:	1 set	Handle square bar 8X8:	2 pcs
Lock body:	1 pcs	Back-locking square bar 5X5:	1 pcs
Lock cylinder:	1 pcs	Installation accessories package:	1 bag
		Key:	5 pcs

SSN26025 Entrance Door Lock

Boundary Dimension

Gold Wiredrawing SG

Green Bronze AB

Functional Characteristic

- Passed the national standard GB 21556-2008 test.
- Suitable for steel or wooden entrance door, etc.
- Solid anti-saw lock tongue.
- When closed, the outer key can open square tongue and oblique tongue.
- Used with 7 beads single-row horizontal groove lock cylinder.

Technical Parameter

Door margin distance: 50mm(ST5085Z)
60mm(ST6072)
Center distance: 85mm(ST5085Z)
72mm(ST6072)
Applicable door thickness: Above 35mm
Square bar: 8×8×L

Handle: Zinc alloy
Shroud plate: Zinc alloy
Mounting screws: High-quality steel
Surface treatment: Nickel Drawing SN

Bronze Lock Matching

SRH33802 Entrance Door Lock

Boundary Dimension

Functional Characteristic

- Passed the national standard GB 21556-2008 test
- Suitable for steel door or wooden entrance door, villa door
- Indoor rapid escape (the dead bolt and latch bolt would open at the same time)
- Button can retract latch bolt, key can retract the dead bolt and latch bolt
- Switch button can realize switch between door lock and passage lock
- Insurance bolt can prevent latch bolt from penetrating
- Standard equipment is lock cylinder with 10 beads double row horizontal groove, A2+B5 keys

Bronze Lock Matching

Technical Parameter

Door margin distance :	64mm	Handle: Copper

Hotel Door Lock

SGY42000

SGY42100

SGY22200

SGY12300

SGY22400

Technical Parameters

- Current supply:4 pcs 1.5V NO.5 alkaline batteries. Battery life:20,000 times opening normally
- Quiescent current: < 10mA, Dynamic current: < 200mA
- Door thickness:38-80mm,more than 50mm need to be remarked
- Opening time:The handle to open the door once effective, if do not open the door for 4 seconds, it will be automatically locked
- Undervoltage prompt:When the voltage is lower than 4.4 V, the sound and light alarm will prompt, but it can also open 1000 times at this time
- Lock record: lock can be store more than 300 latest unlock records, including mechanical lock records.
- Working temperature:-35°C ~+60°C, Working humidity: 15~95%RH
- The control mode:M1 card or T5557 card; Reading distance: < 3cm, Reading time: < 1 s

Hotel Door Lock

Function Characteristics

- Induction card to open the door
- Without an external network
- Open the door to record in real time
- American standard lock body with five lock tongues
- Intelligent alarm
- Escape function
- Hierarchical management

The Difference Between RF57 and E-card System

RF57 system

RF57 system, using T5557 induction card, low frequency induction, induction card is used only for hotel lock settings and the electric switch of their role.

E-card system

E-card system using M1 or Mifare-1 S50 card, high frequency induction. Induction card in addition to using the door lock system, but also can increase the other induction system, and then become an organic whole, such as the elevator management systems, consumer systems, access control management system, parking management system, entertainment, food and beverage management system are focused on the card.

Note: optional accessories can't be mixed in the two systems.

SGY42000 Hotel Door Lock

Boundary Dimension

GOLD

Functional Characteristic

- Passed the testing of GA374-2001 for electronic anti-theft lock
- Suitable for hotel room door or apartment door
- Outside handle is free normally, card or key to open the door, indoor quickly escape
- Latch with functions of preventing plug and pull
- Low pressure alarm, not completely closed alarm, can query the opening record
- Rights Division management, distinguish the opening direction

Technical Parameter

- Current supply: 4 pcs 1.5V No.5 alkaline batteries. Battery life: 20,000 times opening normally
- Quiescent current: < 10mA, Dynamic current: < 200mA
- Door thickness: 38-80mm, more than 50mm need to be remarked
- Open time: The handle to open the door once effectively, if do not open the door for 4 seconds, it will be automatically locked
- Undervoltage prompt: When the voltage is lower than 4.4 V, the sound and light alarm will prompt, but it can still open 1,000 times at this time
- Lock record: lock can store more than 300 latest unlock records, including mechanical lock records
- Working temperature: -35°C ~ +60°C, Working humidity: 15~95%RH
- Material color: Aluminum alloy material, the surface finish is gold oxidation (GOLD) or silver (SN)
- The control mode: M1 card or T5557 card; Reading distance: < 3cm, Reading time: < 1 s

- Rights Division management, distinguish the opening direction

Technical Parameter

- Current supply: 4 pcs 1.5V No.5 alkaline batteries. Battery life: 20,000 times opening normally
- Quiescent current: < 10mA, Dynamic current: < 200mA
- Door thickness: 38-80mm, more than 50mm need to be remarked
- Open time: The handle to open the door once effectively, if do not open the door for 4 seconds, it will be automatically locked
- Undervoltage prompt: When the voltage is lower than 4.4 V, the sound and light alarm will prompt, but it can still open 1,000 times at this time
- Lock record: lock can store more than 300 latest unlock records, including mechanical lock records
- Working temperature: -35°C ~ +60°C, Working humidity: 15~95%RH
- Material color: Aluminum alloy material, the surface finish is gold oxidation (GOLD) or silver (SN)
- The control mode: M1 card or T5557 card; Reading distance: < 3cm, Reading time: < 1 s

Standard Configuration

Handle panel accessories	1pair	Lock body(Inversion installation)	1Pcs
Square bar 8mm	2Pcs	Buckle plate & buckle box	1Bag
Square bar 5mm	1Pcs	Lock cylinder(Including 2 keys)	1Set
Installation accessories	1Bag

SFK65702 Card Machine

Function Characteristics

- Applicable to 125Hz, T5557 card reading
- Must use with "Hotel door lock management system" software
- The RF contactless way to read the smart card
- The USB serial port connected to the computer and operate through computer
- For card authorization, card cancellation

Technical Parameters

- Working voltage: 5 VDC (USB port power supply)
- The working current: < 200 mA
- Operating distance: < 90 mm
- Communication way: RS232 / USB
- The operating frequency: 125 KHZ

SFK65002 Card Machine

Function Characteristics

- Applicable to 13.56MHz, Mifare-1 card reading
- Must use with "Hotel door lock management system" software
- The RF contactless way to read the smart card
- The USB serial port connected to the computer and operate through computer
- For card authorization, card cancellation

Technical Parameters

- Working voltage: 5 VDC (USB port power supply)
- The working current: < 200 mA
- Operating distance: < 90 mm
- Communication way: RS232 / USB
- The operating frequency: 13.56 MHZ

SCJ65702 Data Collector

Function Characteristics

- Applicable to T5557 card hotel lock data collecting
- Must use with "Hotel door lock management system" software
- The USB serial port connected with the computer and operate through computer
- The RF contactless way to extract data
- For card authorization, card cancellation
- Used to collect the latest 990 open records of hotel locks
- When collecting data, the red light will flash, acousto-optic hint after finishing.

Technical Parameters

- Working voltage: DC6V (4Pcs No.7 batteries with 1.5V)
- Operating distance: < 90 mm
- Reading time: 30s
- The operating frequency: 125kHz

SCJ65001 Collecting Card

Function Characteristics

- Applicable to IC card
- Used to collect the latest 380 open records of hotel locks
- Connecting with computer through card machine

SKG65701

Electric Switch

Function Characteristics

- Applicable to T5557 card hotel lock system
- Induction card to take power
- 8-15 seconds delay to power outages after taking the card, to ensure the safety and energy saving
- Taking power way: intelligent detector (Testing whether the card is T5557 card)

Technical Parameters

- Main material:Flame retardancy PC
- Dimension: 86×86×50mm,can be installed at bottom of standard 86 box
- Operating voltage:220V
- Operating current:30A
- Operating way:Electromagnetic induction,the red light indicates when not working
- Operating frequency: 125KHz
- Wiring method:firewire input,output ,zero line.

SKG65702

Hotel Door Lock

Electric Switch

Function Characteristics

- Applicable to M1 card hotel lock system
- Induction card to take power
- 8-15 seconds delay to power outages after taking the card, to ensure the safety and energy saving
- Taking power way: intelligent detector (Testing whether the card is M1 card)

Technical Parameters

- Main material:Flame retardancy PC
- Dimension: 86×86×50mm,can be installed at bottom of standard 86 box
- Operating voltage:220V
- Operating current:30A
- Operating way:Electromagnetic induction,the red light indicates when not working
- Operating frequency: 13.56 MHz
- Wiring method:firewire input,output ,zero line.

SKG65001

SKG65002

SKG65703

Electric Switch

Function Characteristics

- Applicable to T5557 card hotel lock system
- Induction card to take power
- 8-15 seconds delay to power outages after taking the card, to ensure the safety and energy saving
- Taking power way: intelligent detector (Testing whether the card is T5557 card)

SKG65704

Technical Parameters

- Main material:Flame retardancy PC
- Dimension: 86×86×50mm,can be installed at bottom of standard 86 box
- Operating voltage:220V
- Operating current:30A
- Operating way:Electromagnetic induction,the red light indicates when not working
- Operating frequency: 125KHz
- Wiring method:firewire input,output ,zero line.

Hotel Door Lock

Electric Switch

Function Characteristics

- Applicable to M1 card hotel lock system
- Induction card to take power
- 8-15 seconds delay to power outages after taking the card, to ensure the safety and energy saving
- Taking power way: intelligent detector (Testing whether the card is M1 card)

SKG65003

Technical Parameters

- Main material:Flame retardancy PC
- Dimension: 86×86×50mm,can be installed at bottom of standard 86 box
- Operating voltage:220V
- Operating current:30A
- Operating way:Electromagnetic induction,the red light indicates when not working
- Operating frequency: 13.56 MHz
- Wiring method:firewire input,output ,zero line.

SKG65004

SGK65702 Induction Card

Function Characteristics

- Applicable to T5557 card hotel lock system
- Readable ,writable, and encrypted
- Contactless proximity card
- Anti-collision mechanism

Technical Parameters

- Technical specifications: America ATMEL T5557 proximity card
- Storage capacity:330bits,10 partitions, 8-bit password 32 bytes
- Read-write distance:0-50mm
- Data retention period: > 10 years
- Operating frequency:125KHz
- Erase life: > 100,000 times
- Communication speed:106Kbps
- Boundary dimension: ISO standard card 85.6×54×0.82

Hotel Door Lock

SGK65002 Induction Card

Function Characteristics

- Applicable to M1 card hotel lock system, and function as an IC card
- Readable ,writable, and encrypted
- Contactless proximity card
- Anti-collision mechanism

Technical Parameters

- Technical specifications: Philips Mifare-1 S50 induction card
- Storage capacity:1 byte, 16 partitions, each partition of 4 pieces, each piece of 16 bytes
- Read-write distance:0-100mm
- Data retention period: > 10years
- Operating frequency:13.56MHz
- Erase life: > 100,000 times
- Communication speed:106Kbps
- Boundary dimension: ISO standard card 85.6×54×0.82

Product Characteristics

- Applied to the sliding door, tube well door, passage door, residential door etc, Simple structure, convenient installation

SYM21101 Sliding Door Lock

Boundary Dimension

Wiredrawing SN

Functional Characteristic

- Passed the national standard GB 21556-2008 test
- Suitable for sliding door
- Solid anti-sawing lock bolt.
- Outside opening the door with the key, inside opening the door with knob
- Hook tongue structure, regardless of left and right sides

Technical Parameter

Door margin distance :35mm
 Door thickness:35-55mm,
 over 48mm need to be remarked

Handle: Zinc alloy
 Decorative cover: Zinc alloy
 Screw:High quality steel
 Surface finish:Nickel Drawing SN
 Gold Wiredrawing SG

SGSS001 Fireproof Door Lock

Boundary Dimension

Functional Characteristic

- Passed the national standard GB 21556-2008 test
- Passed the A1.5H fire resistance test of GB 12955-2008 of fireproof door.
- Passed 3C certification
- Suitable for tube well doors, machine room doors and circuit doors;
- To open and close door by a shared key outdoor;
- Single lock tongue structure, no distinction of left and right.

Technical Parameter

Door margin distance: 35mm

Applicable door thickness: 35-60mm

Main material: SS 304

Screws: High quality steel

Standard Configuration

Boundary Dimension

Functional Characteristic

- Passed the 1.5H fire resistance test of GB30051-2013
- Applicable to wooden doors and metal doors
- Applicable to fireproof doors and panic exit doors
- Single latch bolt, easy for use and no distinguish of left and right
- To open by push, convenient escape

Technical Parameter

Main length: 1040mm
 Push plate length: 500mm
 Applicable door width: Standard length is 1040mm, 650-1040mm needs cutting by customer, other size needs to be customized
 Surface treatment: Satin

Main body: SS 304
 Push plate: SS 304
 Lock bolt: SS 304

Installation Schematic Diagram

Panic Exit Push Rod Lock

STS11502 Panic Exit Push Rod Lock

Boundary Dimension

Functional Characteristic

- Passed the 1.5H fire resistance test of GB30051-2013
- Applicable to wooden doors and metal doors
- Applicable to fireproof doors and panic exit doors
- with alarm function and will give out Sharp buzz when the lock was unlocked by pulling
- Single latch bolt, easy for use and no distinguish of left and right
- To open by push, convenient escape

Technical Parameter

Main length: 1040mm

Push plate length: 500mm

Applicable door width: Standard length is 1040mm, 650-1040mm needs cutting by customer, other size needs to be customized

Surface treatment: Satin

Chicken Tsui hinge

Instruction for Selecting Hinge

Door weight: The thickness of hinge

Door height: The quantity of installation hinge

Door thickness: The width of hinge

Door material: Screw size

The door thickness and the quantity of hinge

The load bearing reference sheet (3 hinges in 1 sash door)

The thickness of hinge	Load bearing
H=2.0mm	20- 30Kg
H=2.5mm	30- 40Kg
H=3.0mm	40- 60Kg
H=3.5mm	60- 80Kg
H=4.0mm	80-120Kg

Installation Instruction for Hinge

Step 1: General positioning

Step 2: Primary lineation and slotting

Step 3: Fixing of door leaf hinge

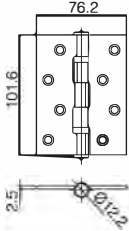

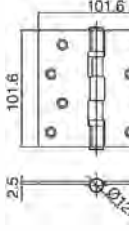

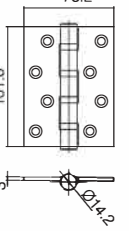

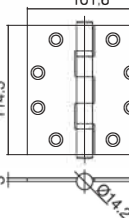

Step 4: Fixing of door frame hinge

Step 5: The connection of door leaf and frame

1. Confirm the installation quantity of hinge according to the door size and weight
2. Mark at the door frame according to the quantity and size of hinge
3. Slotting in the door sash, the depth depends on the hinge thickness and hinge gap, generally, the depth equals a hinge thickness.
4. Slotting in the door frame, the depth equals a hinge thickness.
5. Use two screws to fix a hinge in the door sash
6. Aligning the door at the door frame, next, fixing every hinge on the door frame by two screws separately, then, trying to open the door to check whether the door gap is proper. After adjustment, tightening all screws and fixing the door lock.

Hinge

Code		Boundary Dimension	Size and Load Bearing	
SHY12101			<p>4"x3"x2.5- 2BB Load bearing of three hinges: 30- 40Kg</p>	
SHY12102			<p>4"x4"x2.5- 2BB Load bearing of three hinges: 30- 40Kg</p>	
SHY12103				<p>4"x3"x3- 4BB Load bearing of three hinges: 40- 60Kg</p>
SHY12105				<p>4.5"x4"x3- 2BB Load bearing of three hinges: 40- 60Kg</p>

Hardware Fitting	<h2>Function Characteristics</h2>	<h2>Standard Configuration</h2>
------------------	-----------------------------------	---------------------------------

- Passing the QB/T4595.1-2013 hinge test
- Passing the GB 12955-2008 1.5H fire-resistance test for fireproof door
- Applicable to wooden and metal flat door
- No left and right
- Adopting the through-going shaft for anti-drop
- Adopting the special grease and preventing overflowing
- Two or four ball bearings, smoothly and silently

Hinge: 1 pcs
Mounting screws: 8 pcs

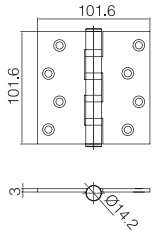

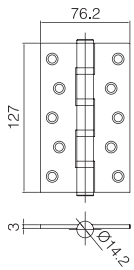

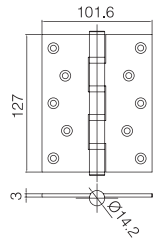

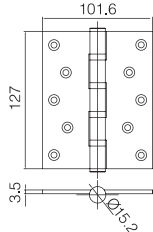

<h2>Technical Parameters</h2>	<h2>Material & Surface Treatment</h2>
-------------------------------	---

The thickness of slotting: Hinge thickness + 0.2mm
Wooden screw

Main material: SS304 / Stainless steel
Surface treatment: Wiredrawing SN
Green Bronze AB
Gold PVD

Function Characteristics

- Meet the QB/T4596-2013 standard for door stopper and door clasp
- Applicable to open-in wooden or metal door
- Inside locking to anti-theft
- Friction resisting and easy installation

ST6085 Anti-theft Lock Body

Functional Characteristic

- Passed GA/T 73-2015 B level mechanical security lock test.
- Suitable for steel or wood security doors.
- Two segments of the spring bolt protruding.
- With insurance tongue, indoor knob control.
- Standard anti-theft lock cylinder and it can open the dead tongue and oblique tongue from outside and inside by using the same key.

Technical Parameters

Door margin distance: 60mm
 Center distance: 85mm
 Applicable door thickness: Over 35mm
 Square hole size: 8×8

Material & Surface Treatment

Panel: SS304, Wiredrawing SN
 Gusset plate: SS304, Wiredrawing SN

ST6487 American Style Lock Body

Functional Characteristic

- Passed the national standard GB 21556-2008 test
- Applicable to steel or wooden entrance door, villa door etc.
- Indoor quick escape (The oblique tongue and square tongue can open at the same time)
- The outside button can retract the oblique tongue, and the outside key can retract the oblique tongue and dead tongue in the meanwhile.
- The function switch button can conveniently realize the switch between door lock and passage lock
- The insurance tongue can prevent the oblique tongue from penetrating
- With billiards lock cylinder of 10 beads double row horizontal groove, A2+B5 key

Technical Parameter

Door margin distance: 64mm
 Center distance: 87mm
 Applicable door thickness: Above 38mm

ST6072E Europe Standard Lock Body

Functional Characteristic

- Meet the European standard EN12209-2003, grade: 2M510C2HC2D
- Applicable to steel or wooden entrance door and interior door
- 8 different lock bodies with different functions for choosing, suitable for different sites (As the table showing)
- 200,000 times service life, sturdy and durable
- With 6 beads S slot single-row lock cylinder, A2+B5 key

Technical Parameter

Door margin distance: 60mm
 Center distance: 72mm
 Applicable door thickness: Above 35mm
 Square hole size: 8×8

Material & Surface Treatment

Panel: SS304, Wiredrawing SN
 Gusset plate: SS304, Wiredrawing SN
 Mounting screws: High-quality steel with electroplating
 Lock shell: High-quality steel with electrolytic plate
 Lock tongue: SS304

Standard Configuration

Lock body: 1 pcs
 Lock gusset plate: 1 pcs
 Screws: 1 bag

Auxiliary Products

Category	Handle panel	Handle decorative	Lock cylinder
Name	Stainless steel handle with cover plate	Split-type stainless steel decorative circle	European style lock cylinder
Code	4 types such as SSN15930	5 types such as SSN12730	SX- 003
Material	Stainless steel	Stainless steel	Copper
Specification	Cover plate: 260×50	The diameter of decorative circle is 53mm	According to the door thickness
Characteristics	Modern and simple	Modern and simple	6 beads single row S groove

The Function Introduction of European Standard Lock

Drawing	Code	Function	Function introduction
	ST6072E1	Passage lock	<ul style="list-style-type: none"> • Single oblique tongue and no lock head • Inside and outside handle can open the oblique tongue
	ST6072E2	Bathroom lock	<ul style="list-style-type: none"> • With oblique tongue and square tongue, bathroom lock head with no key • Inside and outside handle can open the oblique tongue, the inside knob can open and close the square tongue • When emergent, inserting coin to the lock head slotting to open the square tongue outside.
	ST6072E3	Door lock	<ul style="list-style-type: none"> • With oblique tongue and square tongue, and equipped with double lock head or outer lock head with inside knob • Inside and outside handle can open the oblique tongue • Key can open and close the oblique tongue and square tongue
	ST6072E4	Dead lock	<ul style="list-style-type: none"> • Single square tongue and without handle cover plate • With single lock head, double lock head or half lock head • Key can open and close the square tongue
	ST5572E5	Classroom lock	<ul style="list-style-type: none"> • Single oblique tongue with insurance tongue, equipped with half lock head outside • Inside and outside handle can open the oblique tongue • Key can lock and unlock the outside handle, getting out is permitted while getting in is not.
	ST6072E6	Storeroom lock	<ul style="list-style-type: none"> • Single oblique tongue with insurance tongue, equipped with half lock head outside • Outside handle is fixed • Inside handle and outside key can open the oblique tongue.
	ST6078E9	Bathroom indicator lock	<ul style="list-style-type: none"> • With oblique tongue and square tongue and no lock head, display "Somebody" or "Nobody" • Inside and outside handle can open the oblique tongue and the inside knob can open and close the square tongue • When emergent, inserting coin to the indicator slotting to open the square tongue outside.
	ST6072E7	Connection door lock	<ul style="list-style-type: none"> • With oblique tongue and square tongue, equipped with half lock head • Only the outside handle can open the oblique tongue • Key can open and close the square tongue and oblique tongue

ST5072 European Style Lock Body

Functional Characteristic

- Passed the national standard GB21556-2008 test
- Applicable to steel or wooden interior door in residence, office and hotel
- Solid anti-saw lock tongue
- Outside key can open the square tongue and oblique tongue when closing
- With single-row horizontal groove lock cylinder.

Technical Parameter

Door margin distance: 50mm
 Center distance: 72mm
 Applicable door thickness: 35-48mm
 Square hole size: 8×8

Material & Surface Treatment

Panel: SS304, Wire drawing SN
 Gusset plate: SS304, Wire drawing SN
 Mounting screws: High-quality steel with electroplating
 Lock shell: High-quality steel with electrolytic plate
 Lock tongue: Zinc alloy

Standard Configuration

Lock body: 1 pcs
 Lock gusset plate: 1 pcs
 Screws: 1 bag

Auxiliary Products

Category	Handle decorative cover	Lock cylinder
Name	Split-type stainless steel decorative circle	European style lock cylinder
Code	5 types such as SSZ20103	SX-013
Material	Zinc alloy	Copper
Specification	The diameter of decorative circle is 50mm	According to the door thickness
Characteristics	Easy installation, modern and simple four types, European classic 1 type	6 beads single-row horizontal groove
Appearance

ST5072J Magnetic Mute Lock Body

Functional Characteristic

- Passed the national standard GB 21556-2008 test
- Applicable steel or wooden interior door in residence, office and hotel
- Nylon lock tongue with magnet inside for engineering mute, as the oblique tongue and square tongue
- Lock tongue will withdraw automatically when open and lock tongue will stretch automatically when close, no noise
- The outside key can open the magnetic lock tongue when close
- With single-row horizontal groove lock cylinder

Technical Parameter

Door margin distance: 50mm
 Center distance: 72mm
 Applicable door thickness: 35-48mm
 Square hole size: 8×8

Material & Surface Treatment

Panel: SS304, Wiredrawing SN
 Gusset plate: SS304, Wiredrawing SN
 Mounting screws: High-quality steel with electroplating
 Lock shell: High-quality carbon steel with powder injection
 Lock tongue: Magnet inside

Standard Configuration

Lock body: 1 pcs
 Lock gusset plate: 1 pcs
 Screws: 1 bag

Auxiliary Products

ST5050J Mute Lock Body

Functional Characteristic

- Passed the national standard GB21556-2008 test
- Applicable to steel or wooden interior door in residence, office and hotel
- Locking by lifting inside or outside handle
- Quick escape by opening oblique tongue and square tongue at the same time through the inside handle
- Oblique tongue is the mute lock tongue with bearings, other structure is of mute design
- With single-row horizontal groove lock cylinder

Technical Parameter

Door margin distance: 50mm
 Center distance: 50mm
 Applicable door thickness: 35-48mm
 Square hole size: 8×8

Material & Surface Treatment

Panel: Stainless steel, Wiredrawing SN
 Gusset plate: Stainless steel, Wiredrawing SN
 Mounting screws: High-quality steel with electroplating
 Lock shell: High-quality carbon steel with powder injection
 Lock tongue: Zinc alloy

Standard Configuration

Lock body: 1 pcs
 Lock gusset plate: 1 pcs
 Screws: 1 bag

Auxiliary Products

ST5050F Fireproof Lock Body

Functional Characteristic

- Meet the fireproof requirements of GB12955-2008
- Applicable to steel or wooden interior fireproof door in residence, office and hotel
- Locking by lifting inside or outside handle
- Quick escape by opening oblique tongue and square tongue at the same time through the inside handle
- Lock tongue is made of stainless steel and other accessories are made of high-quality carbon steel
- With single-row horizontal groove lock cylinder

Technical Parameter

Door margin distance: 50mm
 Center distance: 50mm
 Applicable door thickness: 35-48mm
 Square hole size: 8×8

Material & Surface Treatment

Panel: Stainless steel, Wiredrawing SN
 Gusset plate: Stainless steel, Wiredrawing SN
 Mounting screws: High-quality steel with electroplating
 Lock shell: High-quality carbon steel with powder injection
 Lock tongue: Stainless steel

Lock Body

ST0050 Single Oblique Tongue Lock Body

Functional Characteristic

- Passed the national standard GB/21556-2008 test
- Applicable to steel or wooden interior door in the office, residence and hotel.
- oblique tongue is triadius mute lock tongue
- With single-row horizontal groove lock cylinder.

Technical Parameter

Door margin distance: 50mm
 Applicable door thickness: 35-48mm
 Square hole size: 8×8

Material & Surface Treatment

Panel: SS304, Wiredrawing SN
 Gusset plate: SS304, Wiredrawing SN
 Mounting screws: High-quality steel with electroplating
 Lock shell: High-quality carbon steel with color-plated zinc
 Lock tongue: Zinc alloy

Standard Configuration

Lock body: 1 pcs
 Lock gusset plate: 1 pcs
 Screws: 1 bag

55L Single Oblique Tongue Lock Body

Functional Characteristic

- Passed the national standard GB21556-2008 test
- Applicable to steel or wooden interior door in the office, residence and hotel
- Close and open by handle inside and outside

Technical Parameter

Door margin distance: 55mm
 Applicable door thickness: over 35mm
 Square hole size: 8×8

Material & Surface Treatment

Panel: Stainless steel, Wiredrawing SN
 Gusset plate: Stainless steel, Wiredrawing SN
 Mounting screws: High-quality steel with electroplating
 Lock shell: High-quality steel with electrolytic plate
 Lock tongue: Stainless steel

Standard Configuration

Lock body: 1 pcs
 Lock gusset plate: 1 pcs
 Screws: 1 bag

Auxiliary Products

Category	Handle decorative cover
Name	Handle decorative cover
Code	5 types such as STD12730

Lock Body

55D Single Square Tongue Lock Body

Functional Characteristic

- Passed the national standard GB21556-2008 test
- Applicable to tube well door, circuit door, machine room door, etc.
- No right and left

Technical Parameter

Door margin distance: 55mm
 Applicable door thickness: Above 35mm

Material & Surface Treatment

Panel: Stainless steel, Wiredrawing SN
 Gusset plate: Stainless steel, Wiredrawing SN
 Mounting screws: High-quality steel with electro-nickelling
 Lock shell: High-quality steel with electrolytic plate
 Lock tongue: Stainless steel

Standard Configuration

Lock body: 1 pcs
 Lock gusset plate: 1 pcs
 Screws: 1 bag

Auxiliary Products

Category	Handle decorative cover	Lock cylinder
Name	Split-type stainless steel decorative circle	European style half lock cylinder
Code	SSN12700/SGSS003	SX- 001S
Material	Zinc alloy	Copper
Specification	The diameter of decorative circle is 53.5mm	According to the door thickness
Characteristics	Easy installation, modern and simple four types, European classic 1 type	6 beads single-row horizontal groove

TW-ST0060 Bathroom Lock Body with Single Oblique Tongue

Functional Characteristic

- Functional Characteristic: Pass the national standard GB21556-2008 test
- Applicable to bathroom door
- No right and left

Technical Parameter

Door margin distance: 60mm
 Applicable door thickness: 35-48mm
 Square hole size: 8×8

Material & Surface Treatment

Panel: Stainless steel, Wiredrawing SN
 Gusset plate: Stainless steel, Wiredrawing SN
 Mounting screws: High-quality steel with electroplating
 Lock shell: High-quality steel plate with galvanization
 Lock tongue: Zinc alloy

Standard Configuration

Lock body: 1 pcs
 Lock gusset plate: 1 pcs
 Screws: 1 bag

Auxiliary Products

Category	Handle decorative cover
Name	Split-type zinc alloy decorative circle
Code	4 types such as SWY25227
Material	Zinc alloy
Specification	The diameter of decorative circle is 50.5mm

ST0035 Sliding Door Lock Body

Functional Characteristic

- Passed the national standard GB21556-2008 test
- Suitable for sliding door
- Single tongue structure, no left and right

Technical Parameter

Door margin distance: 35mm
Applicable door thickness: 35-55mm

Material & Surface Treatment

Panel: SS304, Wiredrawing SN
Gusset plate: SS304, Wiredrawing SN
Mounting screws: High-quality steel with electroplating
Lock shell: High-quality steel with powder injection
Lock tongue: Zinc alloy

Standard Configuration

Lock body: 1 pcs
Lock gusset plate: 1 pcs
Screws: 1 bag

Auxiliary Products

Category	Trimming
Name	Sliding door handle
Code	SYM21101/SYM21102
Material	Zinc alloy

SX-001S European Style Half Lock Cylinder

Functional Characteristic

- Meet the standard requirements of GB21556-2008 for Billiards mortise lock
- Applicable to steel or wooden door
- With 6 beads single-row S groove half lock cylinder
- 3 pieces of key

Technical Parameter

The length of lock cylinder: as the table
 The diameter of head: 16.8mm
 The width of bottom: 9.8mm
 The thickness of key: 2.5mm
 The length of screw: door margin distance
 50/55mm, with M5×60 screw
 door margin distance: 60mm, with M5×70 screw

Material & Surface Treatment

Lock cylinder shell: Brass electroplating
 Lock cylinder body: Brass electroplating
 Key: Brass electroplating
 Surface treatment: Wiredrawing SN
 Green Bronze AB
 Gold PVD

Standard Configuration

Lock cylinder: 1 pcs
 Key: 3 pcs
 Screw: 1 pcs

Lock Cylinder

SX-002 European Style Lock Cylinder

Functional Characteristic

- Meet the GB21556-2008 standard requirement for Billiards mortise lock
- Applicable to steel door or wooden door
- With 7 beads single row horizontal groove lock cylinder
- Lock cylinder with double heads or single head cylinder with knob
- 5 pieces of key

Technical Parameter

The length of lock cylinder: as the table
 The diameter of head: 16.8mm
 The width of bottom: 9.8mm
 The thickness of key: 2.5mm
 The length of screw: door margin distance
 50/55mm, with M5×60 screw
 door margin distance: 60mm, with M5×70 screw

Material & Surface Treatment

Lock Cylinder

SX-004 Glass Door Cylinder

Functional Characteristic

- Passed the standard requirement of GB21556-2008 for Billiards mortise lock
- Suitable for glass door lock.
- With 8 beads double row horizontal groove lock cylinder
- With transmission bar, according to the door thickness to cut the transmission bar, applicable door thickness is 12-15mm.
- 3 keys.

Technical Parameter

Cylinder length: See size chart
 Head diameter: 16.5mm
 Bottom width: 9.8mm
 Key thickness: 2.5mm
 Screw length: M3×15 screw

Material & Surface Treatment

Cylinder shell: Brass electroplating
 Cylinder body: Brass electroplating
 Key: Brass electroplating

Standard Configuration

Lock cylinder:	1 pcs
Key:	3 pcs
Lock ring:	1 pcs
Screw:	2 pcs

Key Appearance

SX- 005 American Style Lock Cylinder

Functional Characteristic

- Passed the standard requirement of GB21556-2008 for Billiards mortise lock
- Suitable for steel or wooden door.
- 10 beads double row horizontal groove with 4 side beads S groove lock cylinder
- A2+B5 keys.

Technical Parameter

Cylinder length: See the chart
 Head diameter: 34.5mm
 Bottom diameter: M29.1×0.794mm
 Key thickness: 2.8mm

Lock Cylinder

SX-006 Anti-theft Lock Cylinder

Functional Characteristic

- Passed the B level test of GA/T73-2015 for mechanical anti-theft lock.
- Suitable for steel or wooden anti-theft door.
- 10 beads double row horizontal groove with 4 side beads S groove lock cylinder and anti-drilling pin.
- The double-head cylinder or the single-head cylinder with knob can be chosen .
- With architect key, A2+B5 keys.

Technical Parameter

Cylinder length: See the chart
 Head diameter: 16.8mm
 Bottom width: 2.5mm

Key Management System

The key management system is often used for apartment, office building, commercial space and other places. According to different needs, lock cylinder with various sizes, forms and special functions are available. With a set of KIN LONG Master Key, it is safe and convenient to open any door of your company or home.

There are general lock cylinder, second-level management lock cylinder, three-level management lock cylinder and four-level management lock cylinder.

Key Management System Architecture Diagram :

According to the architecture of different buildings, there are the corresponding key management systems.

General Lock Cylinder

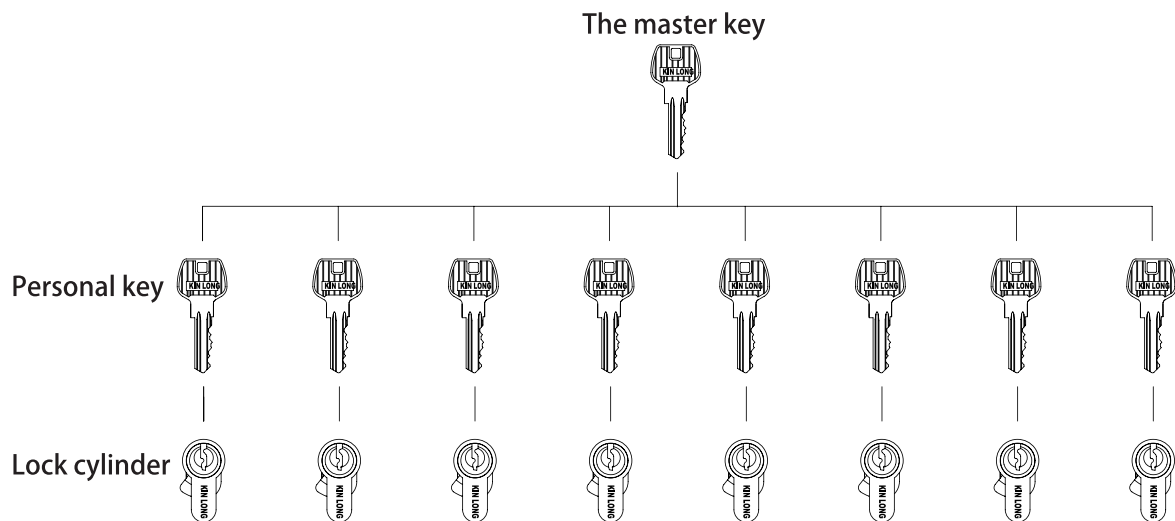

The general lock cylinder has the same key, and any key can open the entire lock cylinders
The specific structure is as follows:

Second-level Management Lock Cylinder

The second-level management lock cylinder has a master key, which can open the lock cylinders of the whole system. The master key is divided into multiple independent keys and each key opens its own lock.

The specific structure is as follows:

Standard Introduction of the American Standard Mortise Lock

Standard Features

Standard

The United States standards for door control system is one of the world's most advanced and strictest standards for door control system.

Among them, the mortise lock standard is ANSI/BHMA A156.13, 1000 series mortise lock and latch lock.

Durability

The service life of the American standard first-level door lock should not be less than 1 million times, which is 10 times than the highest standard of the national standard.

The service life of level 2 and level 3 is not allowed to be less than 800,000 times.

Safety

The products that meet the standard of the United States level 1 are much higher than the current domestic standard in terms of service life, anti-violent destruction, anti-technology opening and anti-corrosion. For other standard commercial door control systems, the operation environment, such as the use of conditions, is particularly complex and demanding. In the environment, the product of our standard gate control system is the best choice. It is mainly suitable for public buildings with high traffic and high hardware requirements.

Eco-friendly

The American standard of door control system has very detailed requirements for surface treatment and anti-corrosion, but mainly focuses on the influence of function.

Standard Content

No.	Test item/Level	Level 1	Level 2	Level 3
Size characteristic				
1	Slanting tongue length/tolerance: -1.6mm	19mm	12.7mm	
2	Stay tongue extension/tolerance: -1.6mm	25.4mm	15.8mm	
Operation test				
3	The maximum torque when knob opens tongue	1Nm		
4	The maximum torque when key opens tongue	1Nm		
5	The maximum torque when handle opens tongue	Spherical handle: 1Nm; Bar handle: 3.1Nm		
6	The maximum pressure when button open the tongue	40N		
7	The maximum force when inclined tongue open the door	20N		
8	The minimum value of extending the length when the oblique tongue in the lock state	14.3mm	9.5mm	
9	The minimum value of the extended length when the insurance in the lock state	9.5mm	7.9mm	
10	220 N the maximum opening torque or force in the test	Spherical handle: 5Nm; Bar handle 8Nm; Button: 180N; Handle: 290 N		
11	The minimum strength of the oblique tongue	5300N		
12	The minimum strength of the dull tongue	6000N		
13	The minimum force of axial tension of handle	Spherical handle: 2200N; Bar handle 1600N; Button: 670N; Handle: 2200 N		
14	Minimum radial load of the handle	1600N	1100N	670N
15	The minimum value of torque when the bar handle is in the lock state	50Nm (after completing the test, the holding torque is not greater than 3.7Nm)		
16	The minimum value of torque when the bar handle is in the no lock state	50Nm (after completing the test, the holding torque is not greater than 3.7Nm)		
17	Minimum pressure of button pressure in unlocked state	310N (after completing the test, the pressure of the button is not greater than 53N)		

No.	Test item/Level	Level 1	Level 2	Level 3	
Safety test					
18	Handle impact test (100J)	10 times	5 times	2 times	
19	Impact test for locking head or cladding (100J)	10 times	5 times	2 times	
20	Locking head impact test (100J)	10 times	5 times	2 times	
21	Slanting tongue, dull tongue impact test	The level 2 requires another twice 200J shocks	The level 3 requires another twice 160J shocks	2 times 80J impact, plus 2 times 120J shocks	
22	Tension test for locking ring or cladding	16000N	11000N	4400N	
23	Tension test of lock head body or lock	16000N	11000N	4400N	
24	Holding handle torsion test in the lock state (the door has not been opened after testing)	Spherical handle	160Nm	110Nm	47Nm
		Handle Bar	240Nm	160Nm	75Nm
		Handle	3000Nm	2000Nm	1000Nm
25	Torque test for locking ring or cladding	160Nm	110Nm	50Nm	
26	Torque test for lock head or lock case	160Nm	110Nm	50Nm	
27	Locking tongue pressure test	Oblique tongue: 1600N; Dull tongue: 2700 N			
28	Dull tongue anti-sawing test	5 minutes			
Life test					
30	Life test	1 million times	800,000 times		
Surface quality test					
31	Neutral salt spray test	Organic coating (96 hours besides the lock body panel and gusset plate; 24 hours for the lock body panel and gusset plate); Inorganic coating: 200 hours			
32	Copper accelerated acetate spray test	All inorganic coatings: 96 hours			
33	Humidity test	organic coating (240 hours besides the lock body panel and gusset plate; 48 hours for the lock body panel and gusset plate)			
34	Pencil hardness test	All organic coatings: 4H			
35	Taber test	500 cycles			
36	Artificial perspiration test	All organic coating- 4 cycles			
37	Uv and condensation test	144 hours			
Material evaluation test					
38	Handle squeeze test (maximum load deformation of 4448N)	10%	2.5%		
39	Cover and cladding impact test, maximum after impact	1.9mm	2.5mm		
40	The deformation of the outer cover is required not to be more than 10% after the load is applied	2,900N	2,500N		

Standard Introduction of the European Standard Mortise Lock

Standard Features

Standard

The European Union's standard for door control system (EU) is the most complete standard in the world. Based on the most capable designing and manufacturing German standard in the global door control system and inclusive of standards of the UK, France, Sweden, Switzerland, Italy and other advanced standards. Lock body, lock head and handle cladding all have corresponding standards.

Durability

European standard is very strict in service life, strength, confidentiality, corrosion resistance and so on, much superior than domestic standard products. It can be designed and customized for different personnel flow density level, various use frequency, and various corrosive environment. It is mainly applicable to public buildings.

Safety

European standard has strict requirements in the products of anti-theft, anti-pry, anti-sawing, anti-drill and other anti-damage ability, anti-technology opening and other performance.

Environmental-friendly

The European standard has very detailed regulations on door lock and other door control systems, which covers door lock of all kinds of grades and requirements, and distinguish the use of various special environments. There are clear rules for surface treatment, and there are strict requirements for being environmental-friendly.

Standard Content

1. Lock body: European standard BS EN 12209 "Building hardware - lock and lock tongue mechanical lock, lock tongue and latch plate - requirements and test methods"

- The outer door lock, the ball lock, the plug lock is in the same standard.
- Standard adaptability - this standard classifies products according to 11 aspects, which can be classified into various grades and requirements.

1	2	3	4	5	6	7	8	9	10	11
Usage category	Durability and inclined tongue load	Door weight and closing force	Fire/smoke proof door applicability	Safety	Corrosion resistance and temperature	Guard and anti-drilling	Door application field	Key operation and lock type	Handle operation type	Key identification
level 3	level 12	level 9	level 2	level 1	level 8	level 7	level 15	level 9	level 5	level 9

2. Lock head: European standard EN 1303: Architectural hardware - lock heads - requirements and test methods

- Main performance and requirements include: strength, confidentiality, life, corrosion resistance
- Wide standard adaptability - this standard classifies products according to 8 aspects, and the classification is relatively fine, which can cover all grades and requirements of lock heads

1	2	3	4	5	6	7	8
Applicable	Lifetime	Door weight	Fireproof performance	Safety	Corrosion resistance	Security features related to keys	Resistance to attack
level 1	level 3	level 1	level 2	level 1	level 4	level 6	level 3

3. Handle cladding: European standard EN1906: Architectural hardware - Handles and knobs - requirements and test methods

- This standard is intended to ensure that the normal operation requirements but not to increase the intensity too much. The additional requirement is to meet the special safety device, which is applicable to situations where high risk may occur.
- This standard specifies five safety levels. Level 0 is specified in the main part of this standard as required. Level 1 to 4 according to requirements set in security locks for security doors.

1	2	3	4	5	6	7	8
Usage category	Lifetime	Door size	Fireproof performance	Protective	Corrosion resistance	Security	Operation type
level 4	level 2	level 1	level 2	level 2	level 5	level 5	level 3

1、 Lock body: European standard BS EN 12209 "Building hardware - lock and lock tongue mechanical lock, lock tongue and latch plate - requirements and test methods"

1	2	3	4	5	6
Usage category	Durability and oblique tongue load	Door weight and closing force	The application of fire door/ smoke door	Safety	Corrosion resistance and temperature
Level 1: minimum security and no anti-drill	Class A: 50,000 times; Free load for the oblique tongue	Level 1: the maximum door weight is 100kg, and the closing force is 50N	Level 0: not applicable to fire door or smoke door	Level 0: no security	Level 0: no detailed corrosion resistance requirement, no temperature requirement
Level 2: low security and no anti-drill	Class B: 100,000 times; Free load for the oblique tongue	Level 2: the maximum door weight is 200kg, and the maximum closing force is 50N	Level 1: applicable to fire door and smoke door. The product can be inoperable after test.		Class A: low corrosion resistance, no temperature requirement
Level 3: medium security and no anti-drill	Class C: 200,000 times; Free load for the oblique tongue	Level 3: the maximum door weighs more than 200kg, or designated by the manufacturer, with the maximum closing force of 50N			Class B: medium corrosion resistance, no temperature requirement
	Class F: 50,000 times; The oblique tongue loads 10N.	Level 4: the maximum door weight is 100kg and the closing force is 25N			Class C: high corrosion resistance, no temperature requirement
	Class G: 100,000 times; The oblique tongue loads 10N	Level 5: the maximum door weight is 200kg, the maximum closing force is 25N			Class D: very high corrosion resistance, no temperature requirement
	Class H: 200,000 times; The oblique tongue loads 10N	Level 6: the door weighs more than 200kg, or is designated by the manufacturer, with the maximum closing force of 25N			Class E: medium corrosion resistance, temperature from 20 °C to + 80 °C
	Class L: 100,000 times; The oblique tongue loads 25N	Level 7: the maximum door weight is 100kg and the closing force is 15N			Class F: high corrosion resistance, temperature from 20 °C to + 80 °C
	Class M: 200,000 times; The oblique tongue loads 25N	Level 8: the maximum door weight is 200kg, the maximum closing force is 15N			Class G: very high corrosion resistance, temperature from 20 °C to + 80 °C
	Class R: 100,000 times; Oblique tongue loading 50N	Level 9: the door weighs more than 200kg, or designated by the manufacturer, with the maximum closing force of 15N			
	Class S: 200,000 times; Oblique tongue loading 50N				
	Class W: 100,000 times; The oblique tongue loads 120N				
	Class N: 200,000 times; The oblique tongue loads 120N				

1. Lock body: European standard BS EN 12209 "Building hardware - lock and lock tongue mechanical lock, lock tongue and latch plate - requirements and test methods"

7	8	9	10	11
Guard and anti-drill	Door application field	Key operation and lock type	Handle type	Key identification
Level 1: minimum security and no anti-drill	Class A: mortise lock, door is unrestricted (hinge and slide), front is not fixed, do not use key to control the exit.	Level 0: not applicable	Level 0: a lock or spring bolt with no driving parts	Level 0: no requirements
Level 2: low security and no anti-drill	Class B: mortise lock, door (hinge), front is not fixed, do not use the key to control the exit.	Class A: with lock head and manual operation	Level 1: a lock or spring bolt with a handle or a spring handle	Class A: at least 3 beads.
Level 3: medium security and no anti-drill	Class C: mortise lock, door (slide), front not fixed, no key to control the exit.	Class B: with lock head and automatic operation	Level 2: lock or spring bolt without a spring handle.	Class B: at least 5 beads.
Level 4: high security and no anti-drill	Class D: external lock, door without limit (hinge and sliding), not fixed in front, no key to control the exit.	Class C: with lock head, with middle lock function two or more	Level 3: high requirement, but a lock or spring bolt without a spring handle.	Class C: at least 5 beads, expand the effective tooth number
Level 5: high security and anti-drill	Class E: external lock, door (hinge), front not fixed, no key to control the exit.	Class D: handle lock or spring bolt, manual lock	Level 4: high requirement but without spring handle, manufacturer designated lock or spring bolt.	Class D: at least 6 beads.
Level 6: very high security and no anti-drill	Class F: external lock, door (slide), front not fixed, no key to control the exit.	Class E: handle lock or spring bolt, automatic lock		Class E: at least 6 beads, expand the effective tooth number.
Level 7: minimum high security and anti-drill	Class H: mortise lock, door (hinge), front fixed, no key to control the exit.	Class F: handle lock or spring bolt, with intermediate lock function two or more		Class F: at least 7 beads.
	Class J: external lock, door (hinge, only open-in), front not fixed, no key to control the exit.	Class G: no key, manual operation		Class G: at least 7 beads, expand the effective tooth number.
	Class K: mortise lock, door (hinge), front not fixed, key control outlet.	Class H: no key, automatic operation		Class H: at least 8 beads, expand the effective tooth number.
	Class L: mortise lock, door (slide), front not fixed, key control outlet.			
	class M: external lock, door (hinge), front not fixed, key control outlet.			
	Class N: external lock, door (slide), front not fixed, key control outlet.			
	Class P: mortise lock, door (hinge), front fixed, key control outlet.			
	Class R: external lock, door (hinge, only open-in), front not fixed, key control outlet.			
	Class S: mortise lock, door is unrestricted (hinge and slide), the front is not fixed, the key controls the exit.			
	Class T: external lock, door is unrestricted (hinge and sliding), the front is not fixed, the key controls the exit.			

2. Lock head: European standard EN 1303: Architectural hardware - lock head - requirements and test methods

1	2	3	4	5	6	7	8
Application range	Lifetime	Door weight	Fireproof performance	Safety	Corrosion resistance and extreme temperature performance	Security features related to keys	Resistance to attack
Level 1: people use it carefully. It's not easy to misuse.	Level 4: 25,000 times	Level 0	Level 0: disapprove of the fire/ smoke door components	Level 0: no security	Level 0: non-corrosive requirements, No temperature requirement	Level 1: refer to the following list.	Level 0: no anti-drilling
	Level 5: 50,000 times				Grade A: high corrosive requirement 96H(+4H), No temperature requirement	Level 2: refer to the following list.	Level 1: net drilling for 3 minutes, total drilling for 5 minutes, resistance to mechanical attack request refer to the following table.
	Level 6: 100,000 times				Class B: non-corrosive requirements; Temperature requirements from - 20 °C to + 80 °C	Level 3: refer to the following list.	Level 2: high corrosive requirement 96H(+4H); Temperature requirements from - 20 °C to + 80 °C
					Class C: high corrosive requirement 96H(+4H); Temperature requirements from - 20 °C to + 80 °C	Level 4: refer to the following list.	
						Level 5: refer to the following list.	
						Level 6: refer to the following list.	

Key security parameter list

Terms and conditions	Related security performance level of key	Test clause	Parameter	1	2	3	4	5	6	Unit
4.8.2	Effective minimum number of teeth	5.8.1	-	100	300	15000	30000	30000	100000	NO
4.8.3	Minimum number of beads	5.8.2	-	2	3	5	5	6	6	NO
4.8.4	The maximum number of teeth at the same level	5.8.3	-	100	70	60	60	60	50	%
4.8.5	The direct coding on the key	5.8.4	-	Yes	Yes	No	No	No	No	-
4.8.6	Inter-opening	5.8.5	torque	1.51)	1.51)	1.51)	1.52)	1.52)	1.52)	Nm
4.8.7	Lock cylinder/ anti-torque lock head	5.8.6	torque	2.5	5	15	15	15	15	Nm

1) apply before life test. 2) apply after life test

Key security parameter list

Terms and conditions	Related security performance level of key	Test clause	Parameter	0	1	2	Unit
4.9.1	Resistance to drill	5.9.1	time	-	3/5	5/10	Min
4.9.2	Resistance to chisel	5.9.2	number of times	-	30	40	No
4.9.3	Anti-torque	5.9.3	number of times	-	20	30	No
4.9.4	Core/lock resistance	5.9.4	force moment	-	15 3	15 3	kN Min
4.9.5	Lock core/anti-torque	5.8.6	torque	1)	20	30	Nm

1) safety performance requirements related to keys (4.8.7)

3. Handle cladding: European standard EN1906: Architectural hardware - Handles and knobs - requirements and test methods

1	2	3	4	5	6	7	8
Application categories	Lifetime	Door size	Fireproof performance	Protective	Corrosion resistance	Security	Operation type
Level 1: moderate frequency of use, highly recommended for careful use, and low probability of misuse, such as indoor living doors.	Level 6: medium frequency: 100,000 cycles.	No classification	Level 0: cannot be used on fire/smoke doors.	Level 0: normal use.	Level 0: no corrosion resistance	Level 0: cannot be used for security doors	Type A: auxiliary spring device.
Level 2: moderate use frequency, advocate careful use, some misuse probability, enter the indoor office door.	Level 7: high frequency: 200,000 cycles.		Level 1: suitable for assembly on fire/smoke door.	Level 1: protection requirements	Level 1: mild corrosion resistance 24H(+1)	Level 1: slight resistance to theft.	Type B: load spring device.
Level 3: high frequency of use, not requiring careful use, high probability of misuse, such as public office door.					Level 2: moderate corrosion resistance 48H(+2)	Level 2: the anti-theft requirement is moderate.	Type U: no spring device.
Level 4: high frequency of use, often with strong use, such as soccer field, offshore installation (oil rig), barracks, public toilet, etc.					Level 3: high resistance to corrosion 96H(+4)	Level 3: anti-theft requirements are high.	
					Level 4: very high corrosion resistance requirements 240H(+4)	Level 4: anti-theft requirements are very high.	

Serial number	Test project	Description	Level 1	Level 2	Level 3	Level 4
1	Rotational torque	—Rotational torque $\pm 5\%$	20Nm	30Nm	40Nm	60Nm
		—Preset torque $\pm 0.1N.m$	1Nm	1Nm	1Nm	1Nm
		—Permanent deformation at 50 plus or minus	$\leq 5mm$	$\leq 5mm$	$\leq 5mm$	$\leq 5mm$
2	The axial intensity	—Axial strength +50 % at $50 \pm 1mm$	300N	500N	800N	1,000N
		—The preloading is $\pm 1N$ at $50 \pm 1mm$	15N	15N	15N	15N
		—Permanent deformation at $75 \pm 2mm$	$\leq 2mm$	$\leq 2mm$	$\leq 2mm$	$\leq 2mm$

		—Static limit deviation after test (except auxiliary spring handle)	$\pm 4^\circ$	$\pm 2^\circ$	$\pm 1^\circ$	$\pm 1^\circ$

Introduction of Chinese Mechanical Anti-theft Lock Standard

Standard Features	
Standard	The standard of GA/T73 "Mechanical anti-theft lock" issued by the ministry of public security is divided into three levels: A,B and C, with the highest level C.
Durability	The standard of mechanical anti-theft lock is A class of 60 thousand times, and class B, class C is 100,000 times.It is mainly applicable to anti-theft.
Safety	The standard of mechanical anti-theft lock is required for the product's number of teeth and the mutual opening rate, and it can resist the damage of the product, such as anti-theft, anti-pry, anti-sawing, anti-drill and so on.The performance indexes such as force and anti-technology opening have specific regulations and requirements, and the comprehensive indexes are relatively high.
Eco-friendly	Need to do neutral salt spray test, level A: 24 hours;Class B: 48 hours;Level C: 72 hours, level 6 is required.

Standard Content

Test project	Level	A	B	C
The thickness of the material	Lock body cover plate thickness	2.5mm	2.5mm	3mm
	Thickness of lock shell and latch plate	1.5mm	1.5mm	2mm
Locks requirements	Key amount	≥ 60,000	≥ 30,000	≥ 30,000
	Mutual opening rate	≤ 0.03%	≤ 0.01%	≤ 0.01%
	Difference exchange number	1	2	2
	The locking head connects the screw to bear the tension	3,000N	3,000N	3,000N
	Live lock head to withstand pull	3,000N	3,000N	3,000N
Main lock tongue requirement	Exposed length	≥ 20mm	≥ 20mm	≥ 24mm
	Axial static pressure (less than 5mm)	2KN	4KN	6KN
	Lateral static pressure	6KN	6KN	6KN
Latch requirement	Lateral static pressure	2KN	2KN	3KN
Handle requirement	Resistance tension	1.6KN	1.6KN	1.6KN
	Resistance torque	25Nm	50Nm	75Nm
Strength requirement of lock box lock plate	Lock box axial static pressure	3,000N	5,000N	7,000N
	Lock plate side to static pressure	3,000N	5,000N	7,000N
	Lock plate tension	3,000N	5,000N	7,000N
	Locking plate anti-lift force	1,000N	3,000N	4,000N
Anti-damage working hours (minutes)	Anti-drilling	10	15	30
	Sawing resistant	5	5	30
	Pick-proof	10	15	30
	Pulling resistant	10	15	30
	Attacking resistant	10	15	30
	Anti-technology opening	1	5	10
Corrosion resistant	Neutral salt fog test level 6	24 hours	48 hours	72 hours
Flexible	The key operates the oblique tongue torque	≤ 1.5Nm	≤ 1.5Nm	≤ 1.5Nm
	Handle to operate oblique tongue torque	≤ 3Nm	≤ 3Nm	≤ 3Nm
	The oblique tongue inserted axial static pressure	2.5N-9.8N	2.5N-9.8N	2.5N-9.8N
	Locking force for oblique tongue	≤ 49N	≤ 49N	≤ 49N
	Static pull of key pulling	≤ 9.8N	≤ 9.8N	≤ 9.8N
General requirements	1. The main lock tongue should not be opened without the key, and the main lock tongue should be locked			
	2.The lock should not be a single row of beads. It should be multi-row beads, single row compound beads, blades or levers, and the internal and external keys should be the same when the double-head locks are used			
	3.When the handle or handle is damaged by external forces, the structure fails or is separated from the lock body, and the main lock tongue should remain locked.			
	4. After the lock tongue is closed, the end face of the locking tongue should be no more than 1mm from the panel, not less than 0.5mm, and the clearance between the latch panel and the lock shell shall not be greater than 0.5mm.			
	5. The clearance between the shoulder of the lock core and the shaft of the lock head is not greater than 0.2mm, and the clearance between the latch and the latch is not greater than 0.5mm.

Standard Characteristic

Standard

In China, the standard of mortise lock, the relevant standard currently has QB/T2474 billiards mortised door lock, which is divided into A,B and C, with the highest grade A.

Durability

The standard has made specific requirements for the flexibility, firmness, density, durability, appearance and testing methods of the products, mainly for home decoration market and public buildings. It is mainly applicable to anti-theft.

Safety

The standard has requirements for the number of teeth and the inter-opening rate of the products, but there are no regulations and requirements for anti-theft, anti-pry, anti-sawing, anti-drill and other anti-damage ability and anti-technology opening.

Eco-friendly

The standard has a requirement on the appearance of the door lock, which is specific to the corrosion resistance of the electroplating layer, but it is not very high. It is basically a neutral salt spray test 24 hours level 6.

Standard Content

Category	Test items	Unit	Level A	Level B	Level C	Category	Single-row billiard	Unit	Level A	Level B	Level C
Insurance density	Number of key teeth \geq	pcs	6	6	6	Strength degree	The length of a single tongue \geq	mm	19	12	12
	The theory number of the key teeth \geq	type	50000	14000	6000		The length of the tongue \geq	mm	12	11	11
	The number of different height key tooth \geq	pcs	5	5	5		The length of the tongue \geq	mm	20	14.5	12.5
	The adjacent number of the same tooth \leq	pcs	2	2	2		The length of the tongue \geq	mm	14	12.5	12.5
	The interlocking rate of interlocking core \leq	%	0.021	0.082	0.205		Oblique lateral static load	N	5000	2000	1500
	Safety device of lock head \geq	pcs	5	2	1		Static load on the side of tongue and tongue	N	5000	5000	1500
Durability	Oblique tongue, hand, press button mechanism durability	time	300000	200000	100000		Safe tongue axial static load	N	1600	1100	670
	Tongue and tongue mechanism manual lock and durability	time	50000	25000	10000		Static load on the tongue axis	N	5000	2000	1000
	Automatic locking of tongue and tongue mechanism	time	100000	750000	50000		Hook tension	N	5000	1500	800
	The locking mechanism is durable	time	100000	750000	50000		Locking the external bending of the hand torque	N.M	40	50	20
	Knob mechanism durability	time	100000	750000	50000		Lock the state outside the ball holder torque	N.M	54	17	14
Flexible	Key, knob, closed tongue torque is less than \leq	N.M	1				Unlocking the state bend to hold the torque	N.M	56	26	17
	The bending moment \leq the closing moment	N.M	5				Unlocking state spherical holder torque	N.M	50	15	12
	The torque of the spherical holder \leq that of the closed tongue	N.M	1				Holding the radial static load	N	1100	1100	1100
	Press the button to open the inclined tongue force less than or less	N	40				Bend the hand shaft to the static pull	N	1600	1000	1000
	Key insertion force	N	15				The ball holds the hand axial static pull	N	2200	1500	1000
	More than 6 prevents the activity from being \leq	N	22				Knob torque	N.M	5	5	5
	Oblique tongue return force $>$	N	2.5				Knob axial static tension	N	670	670	670
	The closing force of the oblique tongue is \leq	N	20				Locked state external press button static load	N	670	670	670
Appearance quality	The tongue axis loads the load	N	15N				To unlock the state, press the button static load	N	500	500	500
	The lock step and the lock body fit the gap	mm	0.5				Locking torque	N.M	16	10	5
	The locking tongue and the latch hole cooperate with the clearance	mm	1				The key of torque	N.M	5	2.5	2
	When the tongue is retracted, it is flat or higher than the latch panel	mm	1				Side static load of the locking plate (inclined tongue hole)	N	5000	2000	1500
	The slanting tongue retracts higher than the latch panel	mm	1				Side static load on the latch plate	N	5000	5000	1500
	The retraction of the oblique tongue is lower than the latch panel	mm	0.5			Static pull of the latch plate	N	5000	1500	800	
	The ramp plane of the oblique tongue is higher than the latch panel	mm	2.5			Static load on the lock shaft	N	1500	1000	500	
	Neutral salt spray test level 10	h	96	48	24	Torque of locking drive	N.M	5	2.5	2	
	The hardness of organic coating pencil \geq	H	2H in GB/T6739			Riveting strength	-	All kinds of riveting pieces are not loose			
	The adhesion of organic coating \geq		GB/T9286 level 2			The anti-attack of cladding (cover ring) \leq	mm	2.5	5.8	5.8	

Introduction of Chinese Fireproof Lock Standard

Standard Features	
Standard	There is no single standard for fireproof locks, which is usually performed according to the requirements and test methods of the fireproof locks of GB 12955-2008. Therefore, the fire lock is mainly used on fire doors.
Durability	Fire doors are not required for durability of fire locks, only fire-resistant time is required.
Safety	It is mainly reflected in the guarantee of personal safety. When the fire resistance experiment is made in a certain time, the door fan should always be closed to ensure indoor people having plenty of time to escape.
Eco-friendly	The standard requirements for QB/T2474 are basically 24 hours and 6 levels of salt spray test.

Standard Content	
Standard requirement	4.4 Fire door fire resistance classification: class A (thermal insulation) : A3.0,A2.0,A1.5(class a),A1.0(class b), A0.5 (class c).The number represents refractory limit time (integrity and thermal insulation).Class B (partial heat insulation) :.Class C (non-thermal type) : heat insulation is not required
	5.2.5.2 Other materials used for fire prevention door shall meet the requirements of A1 level in GB 8624-2006 "classification of building materials and product combustion performance", and the melting point shall not be less than 950 degrees.
	5.3.1.1The door lock of fire door shall be fire lock.
	5.3.1.2 In the lock core mechanism of the door fan, the fire lock shall have the hand or the push rod mechanism, which shall not be allowed to replace the holding hands with round or spherical knob (except for special parts, such as the pipe well door, etc.)
	A1.1 The firmness, flexibility and appearance of the fire lock shall be in conformity with QB/T2474.
	A1.2 Fire resistant lock fire resistance.
	A1.2.1 The fire-proof time of the fire lock shall not be less than the fireproofing time of the door.
	A1.2.2 In the process of fire resistance, the fire protection lock should not have obvious deformation or melting phenomenon, no fire run phenomenon, should be able to ensure that the fire door is closed.
Test method	6.12.1 The lock is installed in the test fire door, and the oblique tongue of the fire lock is met, not use the key to lock the door leaf . The fire resistance test (see the table below) is conducted according to GB/T7633, and the A1.2 requirements are met.

Standard requirement	1. Test equipment: heating furnace, temperature test device in furnace, test device of back surface temperature test.								
	2. Heating time: time temperature relationship.								
	Time (min)	5	10	15	30	60	90	120	180
Test method	6.5 Cotton cushion test In the experiment, when the door fan and its surrounding flame or gas may appear, whether they are cracks, holes or other gaps, they should be in these channels. Place a cotton pad every once in a while to test, the pad and the channel to maintain 20-30mm distance, the cotton cushion starts to catch fire, record the time and the burning part. Fire resistance integrity: 1. If there is a flame on the back surface for more than 10 seconds, it should also be recorded if there is smoke emission. 2. If the flame on the back of the test piece lasts for more than 10 seconds, or the pad starts to catch fire, the fire resistance limit has been reached. Fire resistance: 1. The highest temperature of the door frame back fire is 180 degrees higher than the initial temperature. 2. The average temperature of the door frame back fire is 140 degrees higher than the initial temperature.								

Introduction to the Standard of Chinese Panic Exit Push Rod Lock

Standard Features

Standard

At present, there are standard GB30051 General technical specification for latch panic exit door lock and JG/T 290 Building push rod device for evacuation doors, we execute GB30051

Durability

There are 3 levels for service life, level I 300,000 times, level II 200,000 times, level III 100,000 times

Safety

The main purpose is to ensure the safety of the person, the door under certain pressure, push the lock handle at any position, the door will open. And during a certain time for the fire resistance experiment, the door fan should always be in the closed state, to ensure that the indoor staffs having sufficient escape time.

Eco-friendly

There is no specific provisions for surface corrosion resistance.

Standard Content

Level	Level I	Level II	Level III
Lock head requirements	300,000 times	200,000 times	100,000 times
Lock tongue	The total length of the door lock is not less than 2/3 of the width of the door leaf		
	The total length of the push rod is not less than 1/2 of the width of the door leaf		
Lock tongue requirements	The cooperative gap between the lock tongue and the lock tongue hole is no more than 1 mm		
	The exposed length of lock tongue at the shell is no less than 12mm		
	When the lock tongue is back to the shell, the gap between the lock tongue front face and shell front face is $\pm 0.5\text{mm}$		
Handle requirements	The door lock is flexible opening		
	The axial static pressure of the lock tongue is 3N~12N		
Service life requirements	When there is no load, the opening force is no more than 70N		
	When the load is 1,100N, the opening force is not more than 220N		
Surface requirements	The locking tongue is subjected to a lateral static load of 1,000N, after 30 seconds, it can work normally		
	The door in the closed state, the evacuation direction is subjected to 1,780N thrust, the door cannot be opened		
	After the pressure of 110 and the impact test of 2.65J, the lock body should not be deformed or damaged		
Surface requirements	The back surface should not appear flame over a continuous time of 10 seconds		
	The tongue should not rebound, and the fire door is always closed		
	No melting and obvious deformation of every component		

Introduction of Chinese Hinge Standard

Standard Features

Standard

At present, China's standard for hinge and hinges is QB/T 4595.1-2013 "Hinge: Part 1- the common hinge ", QB/T 3874 "The common hinge", JG/T 125 "hinge of building doors and windows", QB/T 4063 "Bearing hinge", GB 7276 "general technical specification for hinge". we implemented QB/T 4595.1-2013

Durability

The service life is divided into three levels, level 1-300,000 times; level 2-150,000 times and level 3-50,000 times.

Safety

It is mainly to ensure the safety of the person, require different specifications of hinges (hinge) to match different weight of the door leaf, to ensure that the door leaf does not fall off and hurt the staff

Eco-friendly

The neutral salt spray was tested for 18 hours and required to reach level 8.

Standard Content

Size deviation	Category	Length	Pitch-row	Thickness	Width	The pitch-row is the gap between two adjacent holes.	
	Deviation (mm)	0-0.76	± 0.13	± 0.20	± 0.38		
Axial clearance and radial	Clearance (mm)	No more than 0.4					
Requirements after the life span test	Category	Life span (10,000 times)	Axial wear (mm)	Radial wear (mm)	Door leaf sinking (mm)	The experiment was carried out at (12 ± 3) times /min frequency.	
	Level 1	30	0.5	1.57	5		
	Level 2	15	0.76				
	Level 3	5	1.57				
Handle requirement	Hinge length (mm)	88.9 (90)	101.6 (100)	114.3 (110)	127.0 (125)	152.4 (150)	203.2 (200)
	Level 1 & Level 2	2.2	2.8	3.3	3.9	5.1	6.7
	Level 3	2.8	4.4	6.7	7.8	8.9	
Loading	Hinge length (mm)	88.9 (90)	101.6 (100)	114.3 (110)	127.0 (125)	152.4 (150)	Medium-sized hinges
	Thickness of hinge (mm)	2.5	3.0	3.0	3.0	3.0	
	Applicable door weight (Kg)	20	27	34	45	57	
	Hinge length (mm)	114.3 (110)	127.0 (125)	152.4 (150)	203.2 (200)	Heavy duty hinges	
	Thickness of hinge (mm)	4.0	4.0	4.0	4.0		
Applicable door weight (Kg)	68	79	104	135			
Corrosion resistance	Salt spray test	The neutral salt spray was tested for 18 hours and required to reach level 8					

Introduction of Door Stopper and Door Clasp In China

Standard Features

Standard

At present, the standard of Chinese door stopper and door clasp is QB/T4596 "Door stopper and door clasp"

Durability

Only the door stopper has the durability requirement, the service life requirement 100,000 times, the door clasp has no requirement

Safety

It is mainly embodied in the safety of the family property, and the specific requirements on the strength

Eco-friendly

The neutral salt spray was tested for 24 hours, and the magnet part was 6 hours and required to reach level 10

Standard Content

Category	Test project	Requirement
Lock head requirements	Corrosion resistance of electroplating layer	Neutral salt spray test 24 hours (including 6 hours for magnets), level 10
Lock tongue requirements	Adhesion of coating surface	Pencil hardness 2H, adhesion level 3
	Product base planeness	Not more than 1% of product length L
Lock tongue requirements	Vertical door stopper	30N~80N
	Horizontal door stopper	5N~10N
	Axial	Door shaft: 400N; The door clasp: 800 N
Handle requirements	Radial	Door shaft: 800N; The door clasp: no
	The door draws and closes repeatedly	After 100,000 times, the operating force meets the standard requirements

Introduction of Chinese Door Latch Standard

Standard Features

Standard

At present, the standard of China's relevant door latch is QB/T 2032-2013 "Steel door latch"

Durability

Life expectancy is 10,000 times

Safety

It is mainly embodied in the safety of the family property, and the specific requirements on the strength

Eco-friendly

The neutral salt spray was tested for 18 hours and required to reach level 10.

Standard Content

Category	Test project	Requirement
Surface quality	Corrosion resistance of electroplating layer	Neutral salt spray test 24 hours, level 10
	Adhesion of coating surface	Pencil hardness 2H, adhesion level 3
Size deviation	The exposed length of pin tongue	Not less than 9 mm
	Product base planeness	Not more than 1% of product length L
Operating force (torque)	No-load use	30N force or 4Nm torque
Strength	The length of the plugboard $\leq 150\text{mm}$	The lateral side is 1,000N, and the end is 50N
	The length of the plugboard $> 150\text{mm}$	The lateral side is 1,000N, and the end is 100N
Durability	Repeatedly opening and closing	10,000 times
